Macrolens 2003 model A, depth of field sharpness

The above image shows the three object distances measured from the front of the lens ring.
The shortest distance stands for the closest object part to be photographed sharp. Subject size: 9,5 x 13,5 mm.
The middle distance stands for the best sharpest point in the image. Subject size: 10 x 14 mm.
The longest distance stands for the most distand sharp point of the object. Subject size: 11 x 15 mm.
